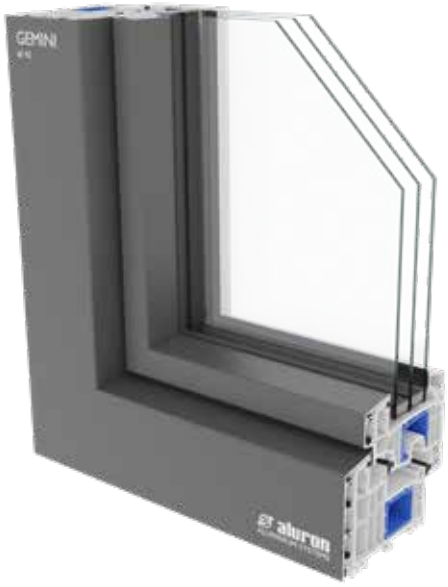
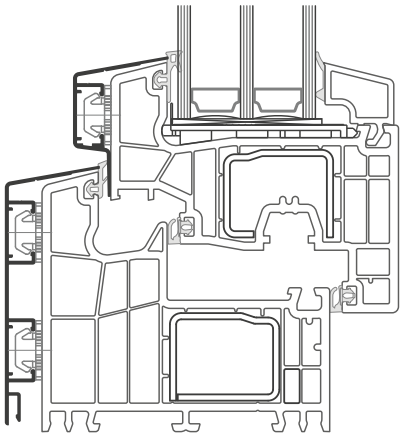
ALUMINIUM SYSTEMS

Professional aluminium cladding systems
Gemini for Salamander bE92

Welded or crimped frames for windows made in the Salamander bluEvolution 92 PVC system. Available constructions: tilt & turn windows, tilt & slide windows (PSK), fixed windows, mullions, transoms, removable mullions, construction crosspieces, balcony doors, inward opening doors, outward opening doors.

They are supplied to the customers in the form of prefabricated frames, perfectly matched structurally to the solutions provided by the PVC system providers. Aluminium frames constitute a separate structure in relation to PVC windows. They are mounted by means of system clips in the final stage of assembly after the glazing is set. This ensures separation between the two different materials and, as a result, the proper and safe operation of windows in changeable temperature conditions.





DESIGN & FUNCTIONALITY

- 45° System corners joined at 45°.
- Mechanical jointing of corners using fasteners with visible cut edges.
- An option to install an independent balustrade with the Gemini VGB extension profile.
- Proprietary software for preparing quotes and placing orders.
- Corner joints with „invisible weld" technology to guarantee a smooth, uniform surface.
